

> FOR SHADE SAILS

## SURVEY:

# Which textiles make the best shade sails?

Only Soltis® and Précontraint® Color Design textiles, utilising the exclusive Précontraint® technology can deliver such a superior level of dimensional stability.

Shade sail systems were inspired by the light and airy shape of boat sails. Based on a combination of triangles in Soltis® or Précontraint® Color Design textiles, these shading systems create efficient and contemporary architectural solutions for solar protection. They suit countless shade applications: on a balcony, a sheltered spot by the pool, in private or public gardens, patio roofing etc.

Only Soltis® and Précontraint® Color Design textiles, utilising the exclusive Précontraint® technology, can deliver such a superior level of dimensional stability.

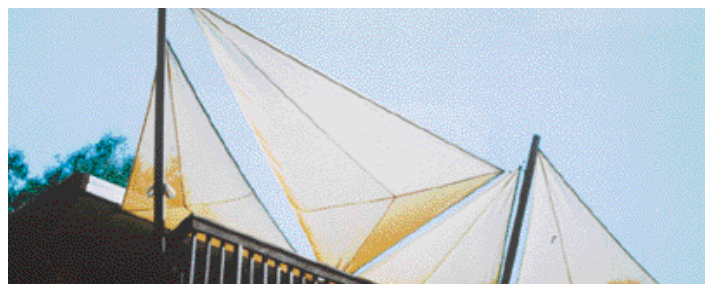

### Aesthetic and harmonious

Shade sails offer an extremely handsome form of sun protection with elegant, contemporary, distinguished and breezy good looks. The set of triangles offer a degree of design flexibility that enables the sails to be used as sloping roof extensions, to

line up with specific angles or to provide a particular façade with more shade. Shade sails are high quality, tailor-made structures, purpose-built for external applications and certain to add to the aesthetic appeal of a building, while satisfying all architectural requirements.

### Unparalleled dimensional stability

Soltis® and Précontraint® Color Design textiles are designed using an exclusive, patented process (the Précontraint Ferrari® technology)

which ensures that the textile will not deform under tension. This guarantees the solidity and longevity of an installation.

### A genuine heat shield

Soltis® acts as a heat shield between the sun and the area to be protected. The uniquely constructed polyester mesh allows air to circulate freely, creating open-air environments that combine protection with the airy feel of the outdoors.

### Waterproof protection

Précontraint® Color Design textiles are completely waterproof, providing total protection from the elements.

### Easy to maintain

The surface of Soltis® and Précontraint® Color Design textiles are perfectly smooth, and protected by pollution-resistant top-layers. Maintenance is easy - a wash with water and mild detergent is sufficient to return these textiles to their original appearance.

### A collection of over 100 colors

The Soltis® and Précontraint® Color Design textiles are available in a brilliantly diverse range of colors. Décor combinations can be created to blend in perfectly with the chosen environment. With over 100 options, anything is possible!

# Shade Sails

**SOLTIS86 SOLTIS92 PRECONTRAIT®**  
*Color Design*

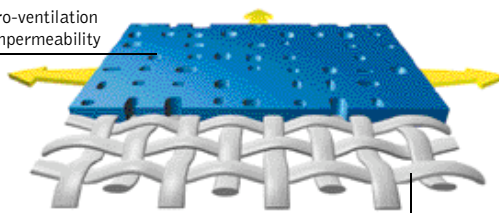

■ The Soltis® and Précontrait® Color Design products offer clearly superior advantages for the construction of shade sails. Their countless benefits include: solidity and durability, dimensional stability, protection against heat and UV rays, impermeability or micro-ventilation and a wide range of colors that keep their original appearance over time. Worldwide, architects and engineers confidently specify these textiles.

**SOLTIS® AND  
 PRÉCONTRAIT® COLOR  
 DESIGN: SAFETY TEXTILES**

## PRÉCONTRAIT FERRARI®: TECHNICAL TEXTILES

Micro-ventilation or impermeability

Exclusive and patented Précontrait Ferrari® technology

Reinforced with high tenacity polyester yarn

Manufactured using the exclusive patented Précontrait Ferrari® technology, the Soltis® and Précontrait® Color Design textiles remain under tension throughout the entire production cycle. The resulting level of dimensional stability is extremely high, meaning the textiles do not deform over time.

### Tailor-made

Shade sails are in no way standardised. They are always designed to suit individual specifications, whilst satisfying safety regulations which recommend textile triangles with a surface area less than or equal to 25 m<sup>2</sup>. There is nothing standard about the performance of the Soltis® or Précontrait® Color Design textiles either- they are the perfect option for projects that are challenging and high-profile.
